

# A heavy box of solar panels

## Overview

---

The short answer is that most standard residential solar panels weigh between 40 and 50 pounds. While most residential roofs can comfortably support this load, factors like roof age, material, structural condition, and local climate all influence. A typical residential solar panel weighs in a moderate range that requires careful handling during installation. A standard 60-cell module, which is the most common size for home installations, usually weighs around 40 pounds (18 kilograms).
