

# Adding floors to buildings with photovoltaic panels

## Overview

---

Photovoltaic walkable floors and roofs offer a cutting-edge solution for integrating solar power into building surfaces. These photovoltaic systems enable building owners to install solar energy on rooftops, generating free electricity while allowing people to safely enjoy and walk on these. Building-integrated photovoltaics is a set of emerging solar energy applications that replace conventional building materials with solar energy generating materials in the structure, like the roof, skylights, balustrades, awnings, facades, or windows. Lake Area High School south-facing façade in Turkey's largest solar manufacturer, Ankara Solar, recently came out with a line of walkable solar panels, which have a durable non-slip glass surface, that can be installed in floors and open areas both inside and out. Developed by PUREBIPV, these PV pavers revolutionize. Solar flooring utilizes photovoltaic technology to capture sunlight and convert it into usable energy, providing a renewable energy source for buildings. With its durable and efficient structure, PVFloor can be used in walkways, parks, commercial areas and residential projects. While investing in the future with.
