All-vanadium liquid flow battery electrical engineering

Overview

Based on the component composition and working principle of the all-vanadium redox flow battery (VRB), this paper looks for the specific influence mechanismoftheparametersonthefinalperformanceofthebattery. However, in order to further advance their application, it is crucial to uncover the internal energy and mass transfer mechanisms. Therefore. on a large scale, indefinite lifetime, and recyclable electrolytes. Primarily, fluid dis-tribution is analysed u ng computational fluid dynamics (CFD) considering only half-cells. Based on the analysis results, a novel model is developed in the MATLAB Simulink environment which is capable of iden. ract.
