[Fuse vs. Breaker: What's the Difference?](#)

[The Basics: What Even Happened?](#)

Let's keep it simple: A circuit breaker is a resettable switch. Often, the issue isn't a power outage—it's a blown fuse or a tripped breaker, both of which are safety mechanisms designed to protect your home's electrical system. If you live in Ontario, especially in older neighborhoods of Markham or parts of the Greater Toronto Area, it's essential to know how. Fuses are small devices containing a metal wire or strip that melts when too much current flows through it, interrupting the circuit and preventing electrical overloads. Circuit breakers take the hassle out of home wiring, providing all the safety of fuses with a simple “reset” technology.
