

Cameroon energy storage power station has been officially connected to the grid

Overview

With a 420 MW capacity, it began supplying the grid in June 2024 and achieved full power in March 2025. • Cameroon's energy sector witnessed significant growth from 2018-2025, driven by major projects like the Nachtigal hydroelectric dam, which reached full capacity in March 2025. • Cameroon has. In rural Cameroon, 75% of the population remains without electricity, even though many live near the grid. The Nachtigal Hydropower Plant financed by the World Bank Group together with partners, will increase Cameroon's power generation capacity by 30%. Poor access to electricity remains a major hindrance to the economic development in Central. Did you know Cameroon's electricity access rate stagnates at 65% in urban areas and plummets to 24% in rural regions?

With hydropower supplying 75% of its electricity, climate-induced droughts – like the 2024 dry spell that reduced reservoir levels by 40% – expose the nation's energy vulnerability. Cameroon 's renewable energy policy direction shifted dramatically during the past decade, with increased focus on solar, off-grid and mini-grid deployments, new research has found.
