

Can floor-to-ceiling windows be equipped with solar glass

Overview

To mitigate heat loss and excessive solar heat gain, the glass must be specified with advanced low-emissivity (Low-E) coatings and constructed as an Insulated Glass Unit (IGU). Floor-to-ceiling sunroom windows transform a sunroom into a luminous space with panoramic views. These installations span the full height and width of a wall, maximizing the connection between indoor and outdoor environments. This extensive glazing floods the interior with natural light but. Floor-to-ceiling windows with double or triple layers of glass have good heat and sound insulation effects, which can improve living comfort. What is a benefit in winter becomes a drawback in summer. These windows enhance curb appeal, offer customizable combinations for different home.
