

Can photovoltaic panels be installed on the roof of an ancestral hall

Overview

Solar panels installed on a historic property in a location that cannot be seen from the ground will generally meet the Secretary of the Interior's Standards for Rehabilitation. But. Can you have the best of both worlds—preserve the charm of your historic building and embrace the future with solar panels?

The short answer is yes! But like all good things, it requires a little finesse. Historic buildings are like fine wine—they can improve with age. This keeps your historic structure untouched. Can be angled for optimal sun, but requires yard space. Panels placed on garages, sheds, or newer, less. Places of worship often have large south-facing roof slopes, which can appear to be ideal for generating energy via photovoltaic (PV) cells. Such roofs, however, are often very visible and are an important part of what makes the building and its setting significant. To preserve that significance.
