

Can photovoltaic panels with the same wattage be mixed

Overview

Yes, you can mix different wattage solar panels. However, to maximize efficiency, they should have the same voltage and current specifications. If these are mismatched, your solar system may not perform optimally. Ever wondered if you can. Mixing solar panels of various voltage or wattage, or produced by different manufacturers, is a frequently asked question by most DIYers. 12v, tracer bn 4215 controller. While it is technically possible, it is not generally advised due to reduced efficiency and power output. Mixing different wattage panels can lead to the system favoring the lowest voltage or amp, thus reducing. For the best results, use identical solar panels across the array. Minimize or eliminate power loss with mixed solar panels by matching each panel's electrical characteristics and using the optimum.
