

# China-Africa Energy Storage Container Investment Project

## Overview

---

Constructed by China's Sinohydro Corporation and financed by a \$1.4 billion loan from the Export-Import Bank of China (Exim Bank), the project aims to increase Uganda's electricity generation capacity and reduce the country's reliance on thermal energy. During the Johannesburg Summit of the Forum on China-Africa Cooperation held in December 2015, President Xi Jinping announced that China would inject additional US\$ 5 billion into the fund in support of the "10 Cooperation Programs" between China and Africa, raising the fund's size to US\$ 10. Constructed by China's Sinohydro Corporation and financed by a \$1.4 billion loan from the Export-Import Bank of China (Exim Bank), the Karuma project is one of several. China Energy Engineering Corporation has officially signed an EPC contract with Globeleq, an independent power generation company in the UK, for the 153MW/612MWh battery energy storage project in Red Sands, South Africa. This project will become the largest single battery energy storage power. As African nations strive to achieve 90% urban electrification by 2030, China-funded storage projects emerge as game-changers. But here's the billion-dollar question: Can these lithium-ion batteries and pumped hydro systems truly bridge the 580 TWh annual energy deficit reported across Sub-Saharan Africa. China has become a major global player in energy finance, infrastructure development and clean technology exports. Between 2010 and 2020, the global solar storage container market is experiencing explosive growth, with demand increasing by over 200% in the past two years. Pre-fabricated containerized solutions now account for approximately 35% of all new utility-scale storage deployments worldwide. North America leads with 40% market.
