

Foreign glass ball solar power generation

Overview

Created by the German architect André Broessel, it is a transparent ball filled with water capable of converting up to a 70% more energy than a classic solar panel. Unlike being flat or thin like other PV panels, this one is a giant transparent sphere! [see-also] Now that really is thinking outside of the box! Using the geometry and optical properties of a giant see-through ball. A German architect with a clear artistic flair has applied his incredible talent to the creation of a crystal ball that generates power. It sounds like something out of a traveling carnival, but the beta. ey, as it's been named by its creator, is functional as well as eye-catching. BARCELONA — Looking into a glass ball has always meant looking into the future, speculating, daring to be visionary. But André Brössel. That's exactly what a young German architect has imagined: a hollow solar sphere that could transform how we capture light — not only from the Sun, but even from the moonlit night sky. THE GLASS SPHERE THAT COULD REINVENT SOLAR ENERGY © facebook A Simple Shape, A Radical Idea At first glance, the. Rawlemon concentrates sunlight and moonlight, improving efficiency by 70% compared to traditional solar panels. Designed to blend into modern architecture, generating electricity without sacrificing.
