

Future New Energy Storage Batteries

Overview

McKinsey's report forecasts a fourfold growth in the global battery market, projecting a value surpassing \$400 billion by 2030, underscoring the pivotal role these technologies play in shaping the future of our energy landscape. In 2025, EVs made up over a quarter of new vehicle sales globally, up from less than 5% in 2020. Across Europe, Japan, South Korea, and the United States, pilot production lines are now being tested. Automotive companies are working directly with battery developers to integrate solid-state cells into future vehicle platforms.
