

German solar power generation standards

Overview

The Solar Package I, which was significantly amended during the legislative process, contains a number of new regulations for solar energy in Germany, particularly in the Renewable Energy Sources Act (Erneuerbare-Energien-Gesetz - „EEG“) and in the Energy Industry Act. The Solar Package I, which was significantly amended during the legislative process, contains a number of new regulations for solar energy in Germany, particularly in the Renewable Energy Sources Act (Erneuerbare-Energien-Gesetz - „EEG“) and in the Energy Industry Act. Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale launch of the technology with guaranteed feed-in tariffs in the year 2000, propelling its companies to global leadership. [2][3][4][5] Germany has been among the world's top PV installer for several years, with total installed capacity over 100 gigawatts (GW) in 2025, [6] up from. Germany is leaving the fossil-nuclear age behind, paving the way for photovoltaics (PV) to play a central role in a future shaped by sustainable power production. This compilation of current facts, figures and findings is regularly updated. Solar Package I, approved in August 2023, aims to accelerate PV installation and enhance citizen participation, albeit, it is still under negotiation within the. Renewables lead electricity mix 62. 7 percent renewable energy share of all electricity production in Germany in 2024, with a share of 13 percent solar power (59. Europe's largest residential customer market. The majority of new systems installed in 2024 were smaller than 30 kWp in size -.

German solar power generation standards

[Recent Facts about Photovoltaics in Germany](#)

In order to cover our entire energy demand from renewable energies (RE), a massive expansion of installed PV capacity is necessary, in addition to a number of other measures.

Solarpaket I

These new regulations are intended to facilitate and accelerate the expansion of solar energy in Germany and contain numerous changes for both ground-mounted and rooftop PV plants.

Solar power in Germany

OverviewHistoryGovernmental policiesStatisticsCompaniesSee alsoExternal links

During the Reagan administration in the United States, oil prices decreased and the US removed most of its policies that supported its solar industry. Government subsidies were higher in Germany (as well as Japan), which prompted the solar industry supply chain to begin moving from the US to those countries. Germany was one of the first countries to deploy grid-scale PV power. In 2004, Germany was the first country, together with Japan, to reach 1 GW of cumulative installed PV capacity. Since 2004 solar pow...
