

Honiara energy storage new energy

Overview

Let's unpack why this Solomon Islands capital became the energy storage case study that's making global engineers sit up straighter than a palm tree in still weather. Honiara faces energy challenges that'd make even Siri stutter: 75% of electricity still comes from diesel generators. The Honiara Energy Storage Power Station isn't just another infrastructure project—it's a cornerstone for grid stability in a region heavily reliant on intermittent solar and wind power. With global energy storage deployments expected to grow by 56% annually through 2030, this initiative aligns. This project, selected through an international tender with six proposals, will be the largest energy storage system in Central America once operational by the end of 2025. With a 120MWh capacity using Tesla Megapack systems, this facility has already reduced grid instability incidents by 63%. That's Honiara, the capital of Solomon Islands, until the 15 MW Honiara Solar Power Station began operations in 2023.
