

# How many square meters of solar panels can meet household needs

LPW48V100H  
48.0V or 51.2V

## Overview

---

Depending on solar panel efficiency, a typical 5kW–10kW system might require between 300–600 sq ft (28–56 m<sup>2</sup>) of usable roof space. Roof pitch also affects output; 30° to 45° is ideal in most regions. Chimneys, trees, vents, or dormers can cast shadows and reduce performance. How many solar panels do you need for common appliances?

Staring at your electric bill and wondering how many solar panels it would take to make it disappear?

You're not alone. It's one of the first questions every homeowner asks when they start thinking about going solar. If you're consuming 1,000 kWh per month in a sunny state like California, you might need just 16 panels, while the same. True energy self-sufficiency depends on your household's annual energy consumption, roof size, panel efficiency, and additional needs such as EV charging or battery storage.
