

# How many watts does the silicon wafer of a photovoltaic panel have

## Overview

---

The average residential solar panel today uses 144-156 silicon wafer cells generating 300-400 watts per panel. But wait – why do numbers vary so wildly?

Grab your metaphorical ruler as we slice through the details. Silicon is also used in virtually every modern electronic device, including the one you're reading this on. Unless you printed it out. Silicon Valley got the name for a reason — and less refined forms of silicon are also used to. This means a standard 400-watt residential solar panel contains approximately 1 to 1.
