

# How much are the UK's solar modules exported

## Overview

---

The average SEG tariff offers about 15p/kWh for exported solar energy. Some suppliers offer more than others, and we have already seen tariffs develop as companies seek to win your custom and bolster their mix of renewable power sources to meet environmental targets. Here are all the pros and cons of EDF's four export tariffs, including their rates, how you can qualify, and which import tariffs they combine best with. These figures. A solar tariff is the rate an energy supplier pays you for each unit of electricity you sell (or "export") back to the National Grid for other people to use. So how much can you expect to earn?

Here we compare the current rates you can.
