

# How to extract silver from photovoltaic panels

## Overview

---

In this new study, a team in Italy developed a relatively inexpensive way to recover the silver used in solar panels. The process involves the use of a base-activated persulfate along with ammonia. However, as solar panels reach the end of their lifespan, there's a growing need to extract the valuable silver from them, not only for economic reasons but also for environmental sustainability. Their paper is published in *Environmental Technology & Innovation*.  A combination technique comprising hydrometallurgy and electrochemical deposition. Recovering silver from end-of-life (EOL) solar panels is essential to enhance resource sustainability, reduce dependency on raw material extraction, and support the circular economy.
