

# How to turn on the power supply equipment of photovoltaic panels

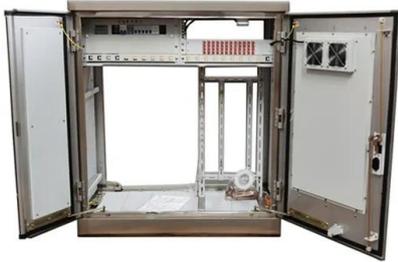

## Overview

---

Turning on your solar panels typically requires a few simple steps you can complete between 15-30 minutes. The process will include: Finding your breaker box and turning on the solar breaker. Here's a quick overview of what you can expect the solar activation process to look like: How long to allot: Plan on less than 15. Basically, to turn off, first cut off the PV (photovoltaic) panels, then inverter and then the battery rack. And to turn on, reverse process: first the battery rack, then the inverter and finally connect the PV panels (but you can change the order for. more Basically, to turn off, first cut off. Every now and then you will need to do some maintenance to your PV system but before you do, you must know exactly how to turn the system off and how to switch it back on! Sometimes consumers do not completely understand how to do this procedure, therefore in this article we will explain it to you. Turning on solar power systems involves several critical steps that ensure efficiency and functionality. Step 1 - Turn Off the AC Switch off the AC isolator. A simple health check is to look at the color of the lights shining on the box during daylight hours when the system's meant to be running.
