

# Install solar power generation in the field

## Overview

---

One approach to decarbonising agriculture involves integrating solar panels – or photovoltaics (PVs) – into fields of crops, greenhouses and livestock areas. Often known as agrivoltaics, this can help farmers reduce their carbon footprint while continuing to produce food. NREL researcher Jordan Macknick works with teams from University of Massachusetts (UMass) Clean Energy Extension and Hyperion on a photovoltaic dual-use research project at the UMass Crop Animal Research and Education Center in South Deerfield, MA. Photo by Dennis Schroeder / NREL. However, with technological advancements and growing. Learn more about solar energy for farmers in 2025. Ground-mounted systems offer easier maintenance and optimal positioning for farms, while roof installations save valuable land space for agricultural.
