

# Is it safe to install a springboard on a photovoltaic bracket

## Overview

---

Working on solar photovoltaic systems means that there is a risk of electric shock and electrocution in the event that electric current passes through the body. Being a homeowner, contractor, or business owner looking into solar, you need proper bracket selection to make your setup successful. But like any other major home improvement project, there are risks involved. It's critical to put your safety first throughout the installation process, as you'll be climbing ladders, working on your roof, and dealing with. A safe and economical PV support system is the focus of attention. But if they are to be a safe alternative to traditional sources of electricity, proper hazard assessments and controlled or even eliminated. In solar installation work, your installation team regularly faces what the Occupational Safety and Health Administration (OSHA) calls "the top 4 construction hazards. " These hazards include falls, electrocution. Third, the installation of photovoltaic support precautions (1) Choose the right material Photovoltaic brackets should be corrosion resistant, anti-aging, high-strength materials, such as aluminum alloy, stainless steel, etc.
