

# Is the PV combiner box DC grounded

## Overview

---

41 requires that all exposed non-current-carrying metal parts of PV equipment, including the combiner box, must be grounded. A grounding electrode is a conductive object that is in contact with the earth. It serves as the connection point between the electrical system. NEC 690. Grounding, in electrical terms, refers to the connection of an electrical circuit or equipment to the earth or a conductive body that serves as the. PV combiner box wiring diagrams provide essential visual documentation of string connections, grounding architecture, and bonding conductor routing required for safe and code-compliant photovoltaic installations. All of the DC- are connected to a multi pole lug only (no means to disconnect). You can check out our Dc String Combiner Box for more details on the product itself. Here is how it operates under normal and fault conditions.
