

# Is the installation cost of pure photovoltaic panels high

## Overview

---

Most homeowners spend between \$12,600 and \$33,376 to install a complete residential solar system in 2026, with the national average at \$19,873 before incentives. Your actual cost depends on your home's energy needs, roof characteristics, location and other factors, all of which we'll break down in. NLR analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NLR's PV cost benchmarking work uses a bottom-up. While the upfront costs of solar panels have dropped by over 70% in the past decade, a comprehensive lifecycle analysis includes several key components: initial purchase and installation (\$15,000-\$25,000 for an average home system), ongoing maintenance (roughly \$300-500 annually), inverter. Installing solar panels costs \$2. 50 per watt and can increase your home's value, making it more appealing to future buyers. Always check for available incentives or tax credits, which can significantly reduce your out-of-pocket costs.
