Overview

Sandia's microgrid research and development addresses real-time controls, operational optimization, power electronics, protection standards, and community resilience methods and tools. Authorized by Section 40101(d) of the Bipartisan Infrastructure Law (BIL), the Grid Resilience State and Tribal Formula Grants program is designed to strengthen and modernize America's power grid against wildfires, extreme weather, and other natural disasters that are exacerbated by the climate. NLR has been involved in the modeling, development, testing, and deployment of microgrids since 2001. It can connect and disconnect from the grid to. Microgrids (MGs) have the potential to be self-sufficient, deregulated, and ecologically sustainable with the right management. Additionally, they reduce the load on the utility grid. However, given that they depend on unplanned environmental factors, these systems have an unstable generation. This white paper focuses on tools that support design, planning and operation of microgrids (or aggregations of microgrids) for multiple needs and stakeholders (e., utilities, developers, aggregators, and campuses/installations). Microgrids can locally manage the.
