

New energy storage exports to Europe

Overview

In 2025, Europe's battery storage market entered a new phase of scale and maturity. 1 GWh of new capacity installed, the European Union achieved its 12th consecutive record-breaking year of growth, confirming battery storage as the fastest-scaling clean energy. A new analysis from LCP Delta and Energy Storage Europe shows that pumped hydro storage holds the largest share of installed capacity at 50. The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy. The fleet of energy storage projects in Europe, including both pumped hydro and battery energy storage systems of all sizes, is expanding rapidly. This growth is set to continue at a strong pace through 2030, fueled by technological advancements, supportive policies, and other key factors. It can also facilitate the electrification of different economic sectors. The European Commission officially introduced the “European Energy Storage Inventory” at the beginning of March 2025—a pioneering real-time dashboard, which for the first time enables a comprehensive and transparent overview of the energy storage landscape in Europe. The report also projects.
