

New energy storage technology lithium battery

Overview

Lithium-ion batteries dominate both EV and storage applications, and chemistries can be adapted to mineral availability and price, demonstrated by the market share for lithium iron phosphate (LFP) batteries rising to 40% of EV sales and 80% of new battery storage in 2023. But in a tough environment in some markets like the US, there's a growing interest in cheaper alternatives. Automakers right now largely care just about batteries'. Battery storage in the power sector was the fastest growing energy technology in 2023 that was commercially available, with deployment more than doubling year-on-year.
