

# Photovoltaic panel installation on herringbone slope

High Voltage  
Solar Battery

## Overview

---

A pilot project in Singapore's Marina Bay uses weather-predicting algorithms to "tilt" photovoltaic panels on herringbone facades before rainstorms. It's like giving buildings spider-sense for optimal light capture - and it's boosted energy production by 18% during monsoon seasons. Imagine a chessboard made of sunlight-capturing tiles, angled like origami folds to drink every drop of solar nectar. This isn't your grandma's rooftop solar setup - it's geometry-meets-green-tech. To effectively install solar energy systems on sloped surfaces, one must consider a range of factors. The selected solar panel is known as Top-of-Pole The overall performance and lifetime of a solar panel installation are significantly influenced by the mounting system. is composed of two parameters: direction and tilt angle.
