

# Photovoltaic panel installation safety education and training

## Overview

---

This 12-hr on-demand course covers key safety topics associated with residential and commercial roof-mounted PV installations- including ladder and lift safety, fall protection, safe rooftop working practices, and solar electrical safety. SEI's 20-hour Solar Safety Training Package consists of two On-demand Continuing Education (CE) courses focusing on the tools and skills to work safely on solar PV systems of various sizes. Training can take many forms based on the target audience and topic area, such as a high school career technical education (CTE) program, an undergraduate or graduate degree. The online Solar Panel Installer Training Course offered through SDSU Global Campus is a comprehensive program designed to help you start a successful career in the photovoltaic solar (PV) industry—with the overall solar market expected to triple in size by 2028. Our course is designed by industry. One of GRID's key training programs is Installation Basics Training (IBT).
