

Photovoltaic panel lift artifact

Overview

A small tool specially designed for roof construction - an electric small lift. That's the magic of electric artifacts installed with photovoltaic panels - where Michelangelo would high-five Einstein if they saw today's tech-art hybrids. Only one person is needed to easily complete the transportation, saving time. Solar panel systems are attached to your roof with mounts. The tilt angle of the modules is measured between the surface of the modules and a horizontal ground all as small or as large a PV system as you need. Example: One can install a PV module on each classroom for lighting, put PV power at a gate to run. These cells are part of large solar projects worldwide.
