

Photovoltaic panel service life comparison

Overview

Most modern panels degrade at a rate between 0.5%, which means a panel will still deliver about 88% of its original. Premium panels deliver superior long-term value: While premium panels with 0.5% more electricity over 25 years compared to standard panels, often justifying the higher initial investment through extended productive life and better. Once panels reach end of life, they don't simply disappear — they become electronic waste that must be handled responsibly. Recycling is the only practical and environmentally sound way to manage aging solar technology and prevent long-term harm. Not just how long they last, but how well they perform along the way. Luckily, the lifespan of solar panels will allow you to produce energy for many years, providing a great return on investment. 9% of their capacity each year. A decade-old panel still.
