

# Photovoltaic panels directly connected to electric heating rods

## APPLICATION SCENARIOS

## Overview

---

Yes, it is possible to connect a solar panel directly to a heater under certain conditions. However, there are important factors like voltage, power, and type of heater that need to be addressed to create a safe, effective system. Immersion heaters can be quickly and easily integrated into existing boilers and buffer storage tanks. Lets say also that you have grid power but cant backfeed or have already maxed out your backfeed. I am well aware that the power won't be constant throughout the day and not have power at all in the night, so you. This method of heating straight off solar panels has an efficiency all of its own: the ability to heat your home with just 2 small skinny wires.

Solar Photovoltaic (PV) panels are generally installed on a roof and use the energy from the sun to power any electrical appliance in your home, including electric radiators.

[Using Solar Panels and Ohms Law to drive DC loads directly](#)

One of the most useful things you can do with the knowledge presented here is to run heating loads directly off solar panels. It is clean, efficient and within reach of most DIY solar power enthusiasts.

An immersion heater powered by photovoltaic electricity, such as our ELWA, AC ELWA-E, or one connected to an ACoTHOR, allows you to turn off the heating in summer.
