

Photovoltaic roof support load

Overview

Most modern roofs can support solar panels, which typically add only 2-4 pounds per square foot. These forces are categorized into three main types: dead loads, live loads, and environmental loads. A complete assessment accounts for all three to ensure PV system structural integrity. Installing solar panels on your roof is a smart investment, but first you need to ensure your home can handle the additional. Learn more about all you need to know about roof loads, load capacities and how they determine if a roof can support the weight of solar panels. Customize wind zones, roof pitch, setbacks, and safety factors for reliable sizing. Export results to CSV or PDF for quick, professional documentation and sharing.
