

# Power supercapacitor solar container energy storage system

## Overview

---

This review highlights the progress in the development of various self-charging power packs with a supercapacitor as an energy storage system in detail. By harnessing the sun's abundant power and efficiently storing it for later use, I envision a future where our dependence on the electrical grid dwindles, and our electricity bills shrink. Supercapacitor batteries are capable of charging and discharging in temperatures as low as -50C while also performing at high temperatures of up to 65C. The 48VDC system comes in a stylish design that will compliment any solar system.
