

Principle of Photovoltaic plus Energy Storage

Overview

Photovoltaics (PV) refers to the technology that converts sunlight directly into electricity using solar panels. Energy storage systems, on the other hand, store excess energy for later use, addressing the intermittent nature of renewable energy sources like solar power. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. For solar-plus-storage—the pairing of solar photovoltaic (PV) and energy storage technologies—NLR researchers study and quantify the economic and grid impacts of distributed and utility-scale systems. Energy. DC-DC converter and solar are connected on common DC bus on the PCS. And it is precisely this ability to "store the sun" that is making storage a valuable ally for those seeking energy.
