

# Residential building rooftop solar power generation

## Overview

---

In this article, we will assess the power generation capacity of rooftop solar panels. **Solar Costs Have Reached Historic Lows:** Average residential solar costs have dropped to \$3.30 per watt in 2025, representing a 60% decrease from 2010 levels. Combined with the 30% federal tax credit extended through 2032, most homeowners can achieve payback periods of 6-12 years with 25+. In a perfect world, the average roof in the U.S. can generate around 21,840 kilowatt-hours (kWh) of solar electricity annually—that's more than most homes need. But also, the world isn't perfect. It'll likely still exceed. Solar rooftop potential for the entire country is the number of rooftops that would be suitable for solar power, depending on size, shading, direction, and location. It utilizes solar panels to capture sunlight and convert it into electricity.
