

Sola Photovoltaic Panel Products

Overview

The six main types of solar panels are polycrystalline, monocrystalline, thin-film, transparent, solar tiles, and perovskite. All of these are photovoltaic panels - meaning they use daylight to generate electricity - and they're all categorised based on their material. The two dissimilar semiconductors possess a natural difference in electric potential (voltage), which causes the electrons to flow through the external circuit, supplying power to the load. A single PV device is known as a cell. An individual PV cell is usually small, typically producing about 1 or 2 watts of power.
