

Solar glass production consumption

Overview

The rapid expansion of PV manufacturing necessitates a substantial amount of glass, with forecasts suggesting consumption ranging from 64–259 million tonnes (Mt) and 122–215 Mt by 2100. ^{11,24} This demand places significant pressure on raw materials for glass production. Solar glass has emerged as the leading cost contribution to solar modules globally today, with eight suppliers headquartered in China accounting for more than 90% market share. Over the past few decades – from when solar PV moved into mass production status – the polysilicon sector was often the. Current solar photovoltaic (PV) installation rates are inadequate to combat global warming, necessitating approximately 3.4 TW of PV installations annually. This would require about 89 million tonnes (Mt) of glass yearly, yet the actual production output of solar glass is only 24 Mt, highlighting a. The solar glass market is mainly supported by the rapid expansion of solar power installations, strong government support for renewable energy, rising investments in utility-scale and rooftop solar projects, and increasing focus on reducing carbon emissions. According to IMARC Group estimates, APAC. According to our (Global Info Research) latest study, the global Solar Glass market size was valued at US\$ 7888 million in 2024 and is forecast to a readjusted size of USD 19050 million by 2031 with a CAGR of 13.07 Billion in 2026 and is anticipated to reach USD 30.3% during the forecast from 2026 to 2035.
