

Solar panel bracket installation holes

Overview

Standard solar panels generally come with pre-drilled mounting holes, but they're located in the aluminum frame rather than the actual back surface of the panel. These strategically placed holes allow installers to secure panels to mounting systems without compromising the protective backsheet. Different mounting systems exist, including roof-mounted, ground-mounted. At its core, a solar mounting system is the supporting framework that secures solar panels to a surface, whether it's a rooftop or the ground. Get this wrong and you could end up with a rooftop breakdown, wobbly panels or worst still a leakage.

Solar panel bracket installation holes
