

# Solar photovoltaic power grid quality

## Overview

---

Installed Photovoltaic (PV) capacity has been rising across the smart grid distribution systems to supply energy needs as worries grow about greenhouse gases. However, the high penetration of PVs could affect the operation and planning of distribution networks. Therefore, to ensure a consistent and. Solar PV has experienced unprecedented growth in the last decade, with the most significant additions being utility-scale solar PV. This is due to the intermittent power that the PV itself generates.
