

Solar power generation is the largest energy source

Overview

In fact, renewables are expected to surpass coal at the end of 2025 (or by mid-2026 at the latest, depending on hydropower availability) to become the largest source of electricity generation globally. Solar PV alone accounts for over half of this increase, followed by wind. India saw record solar and wind power generation growth that outpaced the growth in demand in the first half of this year, according to a report by the global energy think-tank Ember. electricity generation will grow by 1.6% in 2027, when it reaches an annual total of 4,423 BkWh. Global solar generation grew by a record 31 per cent in the first half of the year, while. Data source: Ember (2026); Energy Institute - Statistical Review of World Energy (2025) - Learn more about this data Note: "Other renewables" include geothermal, wave, and tidal. Where in the world do people emit the most CO2?

Which countries get the most electricity from low-carbon sources?

Why. Globally, renewable power capacity is projected to increase almost 460 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Over 451 GW of new solar PV capacity was added in 2024 alone, representing the largest addition of any renewable energy source and accounted for.

Solar power generation is the largest energy source

[US solar capacity overtakes wind - pv magazine International](#)

Solar has become the largest renewable source of installed power capacity in the United States, surpassing wind after 27 consecutive months as the leading source of new grid additions, ...

[Renewables overtake coal as world's biggest source of electricity](#)

Solar power delivered the lion's share of growth, meeting 83% of the increase in electricity demand. It has now been the largest source of new electricity globally for three years in a row.

[Renewable electricity - Renewables 2025 - Analysis](#)

Globally, renewable power capacity is projected to increase almost 4 600 GW between 2025 and 2030 - double the deployment of the previous five years (2019-2024). Growth in utility-scale and distributed ...

[At a Glance: How Renewable Energy Is Transforming the Global](#)

Non-fossil energy sources composed 85% of new electricity generation capacity in 2022, with solar energy representing the single largest new source--56%. This continues and expands ...

[Renewables become biggest source of electricity globally for 1st time](#)

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

[Solar and wind power overtake coal as world's biggest generator of](#)

Worldwide solar and wind power generation has outpaced electricity demand this year, according to a new analysis. Plus, for the first time on record, renewable energies combined ...

Solar energy

Over 451 GW of new solar PV capacity was added in 2024 alone, representing the largest addition of any renewable energy source and accounted for over three-quarters of all renewable capacity ...

[Electricity production by source, World](#)

Fossil fuels are the biggest source of CO2 emissions in most countries, but there are a few exceptions France opened a flurry of nuclear power plants in the 1980s and 1990s, giving it low-carbon ...

[Solar power generation drives electricity generation growth over the](#)

Electricity generation by the U.S. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U.S. ...

[Solar And Wind Energy Overtook Coal As The World's Biggest Source ...](#)

Marking a defining moment in the "historic shift" away from fossil fuels, renewable energy surpassed coal to become the world's largest source of electricity in the first half of 2025.
