

# The history of uninterruptible power supply for wireless communication base stations in Tallinn

## Overview

---

In this article, an algorithm for automatic control of energy sources was developed to improve the uninterrupted power supply of mobile communication base stations. Power grids at the time were unreliable. Prone to brownouts, blackouts, and voltage instability. The need to safeguard sensitive equipment such as telegraphs, early telephones, and. An uninterruptible power supply (UPS) is a system that provides back-up power in the event of a power failure due to a natural disaster such as a typhoon or lightning strike, or an unexpected accident. Practice shows that the existing energy supply sources - the power grid, diesel generators and batteries - do not allow for effective operation in.

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide near-instantaneous protection from input power interruptions, by supplying energy stored in batteries, supercapacitors, or flywheels. T...
