

# The same wattage solar all-in-one machine has low brightness

✓ 50KW/100KWH

✓ HIGHER POWER OUTPUT  
IN OFF-GRID MODE

✓ CONVENIENT OPERATION  
& MAINTENANCE

✓ PRE-WIRED

## Overview

---

These are some of the reasons why the array is generating less power than expected: Low sun angle, seasonal differences or morning/evening. Shading from trees or buildings. Broken or faulty solar panel. The MPP Solar/Growatt units and most all-in-ones are notorious for high idle energy consumption. This consumption does NOT go away as the inverters are used. Issues. This guide is for solar panel owners—especially those relying on their system for significant electricity savings—who are asking: Why has my solar output dropped suddenly?

How do I troubleshoot low solar panel performance?

When should I call for professional solar service?

1. For example, they have a 100w solar flood light, its brightness is much lower than a 100W non-solar powered flood light, why?

First of all, you need to understand that. Environmental factors cause 70% of solar production issues: Weather, shading, and dirt accumulation are the most common culprits behind reduced solar output, making regular monitoring and maintenance essential for optimal performance. 8% annually: Quality solar panels.
