

There is a solar power generation base in Taihang Mountain

Overview

China is leveraging its mountainous terrain by constructing a vast solar panel farm on the Taihang Mountains in Shexian county, Hebei province. This initiative is part of the country's push for clean energy solutions. But here's the twist: this 400-kilometer stretch between Beijing and Henan has become the ultimate laboratory for mountainous solar solutions. With 2,500+ annual sunshine hours and elevations reaching 3,000 meters, it's like nature built a solar testing ground with built-in obstacle course. Xinhua is funded in whole or in part by the Chinese government. 7 km² at the end of December 2020. The Taihang Mountains in Hebei Province (36°13'-40°29'N, 113°30'–115°44'E), located in the western part of Hebei Province (Fig. 1), are a crucial ecological barrier and Although some regions in the western part of the Taihang Mountains. China has built solar farms on mountains, including a notable example in Lishui, Zhejiang province, where an entire mountain slope is covered with solar panels, and another example is the Longyangxia Dam facility on the Tibetan Plateau.
