

Tin foil on Laos outdoor base station

Overview

Yes, aluminum foil can be used to improve antenna reception. Some people got really into it, too, with different aiming styles and everything. Antennas are devices that transmit and receive electromagnetic waves, which are a form of energy that propagates through the air. These waves have a specific frequency, amplitude, and phase, which. Whether you're living on the beach in Sydney or kilometers away from the nearest town in the outback you've got to settle down and watch some TV sometimes. That pixelating and glitchiness that always seems to come. Most CB (27MHz) base antennas are about 18' tall. probably too tall for an interior room or attic. The roofing metal itself is unpainted galvalume-coated steel -- about as conductive as a roof can get. Due to zoning/neighbors, I can't go much higher than 40'-50' with the entire height.
