

Weather station uses ultra-large capacity photovoltaic integrated energy storage cabinet

Overview

These weather stations are modular, plug-and-play, and are SunSpec certified / compliant. Easily integrate important weather analytics and PV panel conditions into your SCADA via Modbus RTU using an RS-485 interface. Solar irradiance is the full energy output from the sun. The RK900-01 model by RIKASENSOR exemplifies this, serving as a photovoltaic weather station (or photovoltaic power station meteorological instrument) is a high-precision monitoring device specifically designed for photovoltaic power systems. Weather stations monitor various environmental parameters—such as solar irradiance, temperature, wind. Climate-specific energy yield optimization stands as a critical driver for solar photovoltaic weather station adoption.
