

West Asia solar panel standards in China

Overview

In November 2024, China's Ministry of Industry and Information Technology released revised guidelines for the photovoltaic (PV) industry. The new guidelines are set to reshape the solar manufacturing industry, addressing overcapacity, pricing volatility and inefficiency. According to the International Energy Agency (IEA), global solar energy capacity grew by a staggering 22% in 2020 alone, reaching over 800 gigawatts (GW) and becoming the fastest-growing renewable energy source. Today, China's share in all the manufacturing stages of solar panels (such as polysilicon, ingots, wafers, cells and modules) exceeds 80%. This is more than double China's share of global PV demand. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025.
