Overview

The answer depends on several factors: how much space you have, what kind of inverter is installed, and whether you're also planning to add a battery. For example, if your solar array uses a string inverter that's already maxed out, you might need a second inverter or a system. If you add solar panels to an existing system, you can increase your solar electricity generation, extend the life of your installation, and create further savings on utility energy costs. The economics will probably look a lot different than the first time you went solar. Adding panels to an existing system is more common than you might expect.
