

# Which new energy charging station has the most stations

## Overview

---

At the end of 2024, the Netherlands had the largest national charging network in Europe, with over 180 000 public charging points, followed by Germany (160 000) and France (155 000). That includes hardware flagged as temporarily available. There are more than 75,000 EV charging locations across the contiguous U., though some regions are. The Joint Office of Energy and Transportation provides resources to help transportation stakeholders plan electric vehicle (EV) charging infrastructure. 3 million public charging points were added to the global stock. While the electric vehicle (EV) market continues to grow at an unprecedented rate, one question remains at the forefront: Who has the most EV charging stations?

As the demand for electric vehicles surges, the need for a robust and reliable charging infrastructure becomes increasingly important.
