

# Will a broken photovoltaic panel affect Internet access

## Power Conversion System

- Single-stage three-level modularization
- Multi-branch input to reduce battery series and parallels connection

## Overview

---

The short answer is no, solar panels themselves do not directly impact your Wi-Fi signal. Allow me to explain: Will a Cracked Solar Panel Still Work?

Thankfully, in most cases, cracks won't significantly affect your panel's functionality and a cracked solar panel will still work. This can be frustrating, especially if you depend on a stable internet connection for daily tasks. Electromagnetic interference (EMI) from inverters can affect WiFi, but it's usually rare. There are damage variations and decisions to make. This inefficiency can result in diminished performance over.
