

# With electricity but without grid solar energy on-site energy solar

## Overview

---

Like all solar energy systems, off-grid systems use solar panels to harness the sun's energy for residential or commercial buildings. When you hear "off the grid," you might picture a cabin in a remote area powered by a few solar cells and wind turbines, completely disconnected from modern conveniences. But the reality is more nuanced than this popular image suggests. Going off the grid means your home produces and stores all its. For many people, powering their homes or small businesses using a small renewable energy system that is not connected to the electricity grid -- called a stand-alone system -- makes economic sense and appeals to their environmental values. But here's the kicker - a whopping 940 million people worldwide still lack access to electricity.
